

Feedback Capture Grid

Likes · criticisms · questions · new ideas

PROFESSIONAL DEFINITION

A Feedback Capture Grid is a 2x2 template for structuring reactions to a prototype into four quadrants: things the reviewer **liked**, **criticisms** or wishes, **questions** raised, and **new ideas** sparked. It forces specific, balanced feedback instead of vague praise.

WHO DEVELOPED IT

A d.school / IDEO facilitation tool, widely used in design-thinking testing.

WHY IT WAS DEVELOPED

Open feedback drifts to polite generalities ('it's nice'). The grid channels reactions into actionable categories and guarantees both positives and criticisms surface.

FIGURE 1 · PROCESS VIEW

Figure 1. Feedback Capture Grid framed as a continuous, iterative method — explore, apply and learn cycle back through the work rather than run once.

HOW IT IS USED

Present the prototype, then reviewers fill each quadrant; the team clusters feedback across reviewers to prioritise changes.

WHEN IT IS USED

The Test phase, during and after prototype reviews.

BY WHOM IT IS USED

Design teams, facilitators and reviewers.

INNOVATION RELATIVE TO PRIOR PRACTICE

It turns unstructured reactions into **structured, prioritisable input**, separating signal from politeness.
