

DT Workshop Design

Plan, facilitate and time a hands-on session

PROFESSIONAL DEFINITION

DT Workshop Design is the craft of planning and running a design-thinking workshop: a clear objective, the right participants, a timed sequence of activities that move a group through divergent and convergent work, and a defined decision or output the session must produce.

WHO DEVELOPED IT

Codified across facilitation practice — the d.school, IDEO, and workshop guides such as the *Design Thinking Playbook*.

WHY IT WAS DEVELOPED

Workshops fail when they rely on inspiration rather than structure. Deliberate design of objectives, activities and timing is what makes a session produce real outcomes.

HOW IT IS USED

Define the decision the workshop must reach, choose activities that generate then converge, script timings and roles, prepare materials, and plan the follow-through.

WHEN IT IS USED

Whenever running a collaborative design or innovation session, and in implementation to spread the method.

BY WHOM IT IS USED

Facilitators, design leads and change agents.

INNOVATION RELATIVE TO PRIOR PRACTICE

It treats facilitation as a **designed experience** in its own right, ensuring the method is applied well rather than merely invoked.
